ROHIT SONAWANE

Backend Engineer | Node.js · TypeScript · NestJS · AWS · Microservices

Pune, India | +91-7021843686 | rrsonawne@gmail.com

PROFILE

Backend engineer with 3+ years of backend development experience and 6+ years of overall work experience. Build APIs, event-driven services, authentication flows, and integrations with NestJS, RabbitMQ, BullMQ, Kafka, Redis, PostgreSQL, and AWS (EC2, S3, RDS, Lambda, API Gateway). Hands-on with CI/CD (GitHub Actions, Jenkins), Jest testing, and Prometheus/Grafana monitoring. Lead backend delivery on a multi-service booking platform; worked on systems supporting 100K+ concurrent peak-event users.

TECHNICAL SKILLS

Backend: Node.js, NestJS, Express.js, TypeScript, JavaScript, REST APIs, microservices, event-driven architecture, Swagger/OpenAPI

Data & messaging: PostgreSQL, MongoDB, TypeORM, Redis, RabbitMQ, BullMQ, Kafka

AWS & infrastructure: EC2, S3, RDS, Lambda, API Gateway, IAM (least privilege), Docker, Kong API Gateway

Security & identity: JWT, RBAC, Keycloak, OpenID Connect (OIDC), Infisical

Delivery & observability: GitHub Actions, Jenkins, CI/CD, Jest, Winston, Prometheus, Grafana, Sentry

Frontend: React, Next.js

PROFESSIONAL EXPERIENCE

Senior Backend Engineer | **Shree Infosoft** **Feb 2026 - Present**

- Lead backend development on a multi-service booking platform: own service design, review code, and guide the team on delivery.
- Architected the booking service and third-party API integration service.
- Designed the lookup service for configurable airline, airport, and train options, with admin and role-based controls over available data.
- Built the tenant policy service for policies, access, client, and campaign management, plus a notification service for email delivery.
- Implemented a Kafka-driven audit service that records events emitted when bookings, policies, and other entities change.
- Integrated Kong API Gateway with Keycloak; secured internal HTTP calls with X-API-Key and managed secrets with Infisical.
- Added Winston structured logging and i18n across services; documented APIs with Swagger/OpenAPI and deployed with Docker.
- Wrote Jest unit and e2e tests achieving 85% coverage.

Backend Engineer | **IceSpice Technologies** **Aug 2023 - Jan 2026**

- Built an AWS Lambda rewards engine for game integrations, validating encrypted events, enforcing point limits, and recording credits and debits in a ledger.
- Developed developer and merchant APIs for app events, product visibility, orders, referrals, promotions, and cash-plus-points checkout.
- Moved bulk ledger updates out of the login path into RabbitMQ workers, reducing login latency from 20 seconds to 1 second during peak events.
- Integrated digital voucher distribution and notifications; delivered Redis caching and real-time order updates for a platform supporting 100K+ concurrent peak-event users.

Backend Engineer | **Myzer** **Dec 2022 - Aug 2023**

- Built a multi-tenant landing-page SaaS with organization roles, JSON-based templates, publishing, subscriptions, and usage analytics.
- Integrated OpenAI for branded page copy and Midjourney for image generation; optimized generation from 3-4 minutes to under 20 seconds.
- Added Redis caching and deployed the Node.js backend on AWS EC2.

Developer Trainee | **FunctionUp** **May 2022 - Dec 2022**

- Developed Node.js/Express APIs with MongoDB and JWT authentication.

Associate | **Accenture** **May 2019 - May 2022**

- Handled insurance transaction processing and document verification workflows.

SELECTED PROJECT

Clinzo360 API | **Multi-tenant clinic SaaS backend** **2026 - Present**

- Built a NestJS 11, TypeORM, and PostgreSQL API with global user identity, per-clinic memberships and roles, and clinic-pinned sessions.
- Implemented transactional clinic onboarding, login and refresh-token rotation, clinic switching, session revocation, email verification, and owner membership protection.
- Added tenant-scoped clinic endpoints, global JWT/tenant/role guards, request throttling, consistent response/error envelopes, and invitation management.
- Integrated Resend email templates, pluggable local storage, GitHub Actions CI/CD, and Sentry; documented module boundaries and transaction rules.

EDUCATION

Bachelor of Commerce (B.Com) | University of Mumbai | 2019
